

Soil is
nearly
half air and water!

Air and Water

Most of our food is
grown in soil!

There are thousands
of soil types!

It takes 500 years
for a centimetre
of soil to form

A teaspoon  of soil contains more creatures

...

...than there are people on the whole planet!

Soil is
under
all our
feet...

You just have to look!

Soil forms really slowly, so we have to look after it!
